### Technical Data

Electrical features	
Rated current	1-63A
Poles	1P 2P 3P 4P
Rated voltage Ue	1P: 230/400V~ 2/3/4P:400~
Insulation voltage Ui	500V
Rated frequency	50/60Hz
Rated breaking capacity	4500/6000A
Rated impulse withstand voltage(1.2/50) Uimp	6kV
Dielectric test voltage at and ind. freq.for 1min	2kV
Polution degree	2
Thermo-magnetic release characteristic	B C D
Electrical life	4000
Mechanical life	10000
Installation	
Contact position indicator	Yes
Protection Class	IP20
Reference temperature for setting of thermal element	30°C
Ambient temperature (with daily average $\leq 35^{\circ}\text{C}$ )	-5~ +40°C
Storage temperature	-25~ +70°C
Terminal connection type	Cable/U-type busbar/Pin - type busbar
Terminal size top/bottom for cable	25mm <sup>2</sup> 18-3
Tightening torque	3.0N·m 22
Mounting	On DIN rail FN 60715 (35mm) by means of fast clip device
Connection	Top and bottom
Combination with accessories	
Auxillary contact	Yes
Alarm contact	Yes
Shunt release	Yes
Under voltage release	Yes

<b>Release time Ms</b>	4-12	5-19	5-19	8-12	6-20	6-20
<b>Operation Range</b>	Pick-up (85%-110%)Us Drop-out (20%-75%)Us					

<b>Electric value</b>	AC50/60Hz, up to 690V;
<b>Ambient temperature</b>	-5°C~+40°C; the average during 24 hours should not exceed +35°C
<b>Altitude</b>	≤2000m;
<b>Atmosphere conditions</b>	At mounting site,relative humidity not exceed 50% at the max temperature of +40°C, higher relative humidity is allowable under lower temperature. For example,RH could be 90% at +20°C,special measures should be taken to occurrence of dews;
<b>Pollution degree</b>	3
<b>Installation conditions</b>	The inclination between installation plane and vertical plane is within ±5°
<b>Impact and shake</b>	The products should locate in the places where there are no obvious impact and shake

# Trip Unit For PA-NSX

#### PA-TMD thermal-magnetic trip units

TM-D, for protection of cables on distribution systems supplied by transformers

#### Protection Thermal protection (Ir)

Thermal overload protection based on a bimetal strip providing an inverse time curve I<sup>2</sup>t, corresponding to a temperature rise limit. Above this limit, the deformation of the strip trips the circuit breaker operating mechanism.

This protection operates according to:

Ir that can be adjusted in amps from 0.7 to 1 times the rating of the trip unit (16 A to 250 A), corresponding to settings from 11 to 250 A for the range of trip units a non-adjustable time delay, defined to ensure protection of the cables.

Magnetic protection (Im)

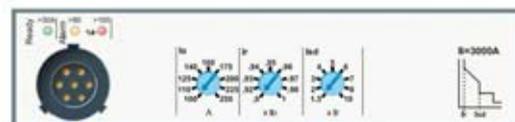

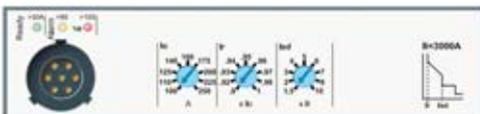

Short-circuit protection with a fixed or adjustable pick-up Im that initiates instantaneous tripping if exceeded.

TM-D: fixed pick-up, Im, for 16 to 160 A ratings and adjustable from 5 to 10 x In for 200 and 250 A ratings fixed pick-up for 16 to 63 A ratings.

Protection against insulation faults

Two solutions are possible by adding:

a Vigi add-on acting directly on the trip unit of the circuit breaker  
a Vigiex relay connected to an MN or MX voltage release.  
MicroLogic 2 trip unit

Circuit breakers equipped with MicroLogic 2 trip units can be used to protect distribution systems supplied by transformers. For generators and long cables, MicroLogic 2 G trip units offer better suited low pick-up solutions

#### Protection

Settings are made using the adjustment dials with fine adjustment possibilities

Overloads: Long time protection (Ir)

Inverse time protection against overloads with an adjustable current pick-up Ir set using a dial and a non-adjustable time delay Ir.

Short-circuits: Short-time protection with fixed time delay (Isd)

Protection with an adjustable pick-up Isd. Tripping takes place after a very short delay used to allow selectivity with the downstream device.

Short-circuits: Non-adjustable instantaneous protection

Instantaneous short-circuit protection with a fixed pick-up.

#### Indications Front indications

Green "Ready" LED: flashes slowly when the circuit breaker is ready to trip in the event of a fault.

Orange overload pre-alarm LED: steady on when  $I > 90 \% I_r$ .

Red overload LED: steady on when  $I > 105 \% I_r$ .

Ready, Alarm

#### Remote indications

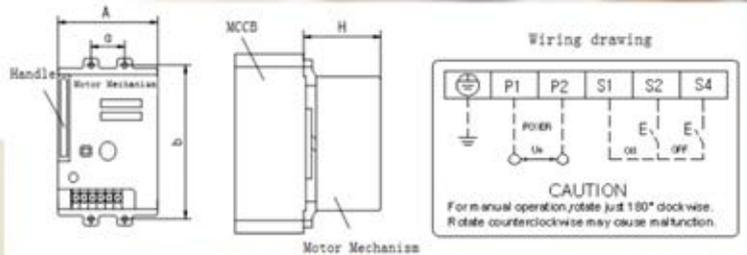

An overload trip signal can be remotely by installing an SDx relay module inside the circuit breaker. This module receives the signal from the MicroLogic electronic trip unit via an optical link and makes it available on the terminal block. The signal is cleared when the circuit breaker is reclosed.

#### MicroLogic 1.3 M for magnetic protection only

MicroLogic 1.3 M trip units provide magnetic protection only, using electronic technology. They are dedicated to 400/630 A 3-poles (3P 3D) circuit breakers or 4-pole circuit breakers with detection on 3 poles (4P, 3D) and are used in certain applications to replace switch-disconnectors at the head of switchboards. They are especially used in 3-poles versions for motor protection

# Economical Motor Mechanism

PA-CNSX

### Mounting Notes:

check the motor mechanism is matched the MCCB or not.  
 after motor mechanism mounted, firstly handle test to  
 check the ON/OFF and reset (ON) action in function.  
 when handle operation, first switch the motor mechanism  
 to be handle step, inset the handle and turn handle in clocking  
 180°, after handle operation, switch the motor mechanism back  
 to auto step.

before power inducting, check the voltage is correct  
 and wiring is correct.

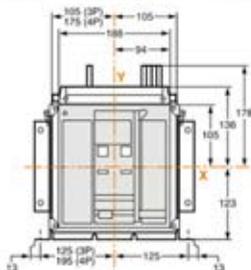

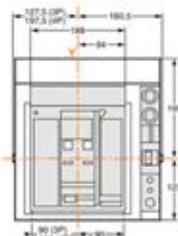

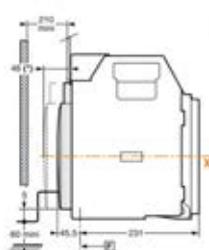

when power inducting, first should check MCCB.

If under voltage Auxiliary switch is mounted, the under voltage  
 releaser power should be inducted. And check the voltage is  
 $\geq 85\%$  rating voltage.

when power inducted, the motor mechanism operation cycle  
 frequency should not more than 180/hour (DC3 63-250), should  
 not more than 60/hour (DC3- 400-800)

Item	Dimension				Rated Voltage (V)	Action Current (A)	Mechanical endurance (o-cycle)	Motor Power (W)

# Motor Mechanism

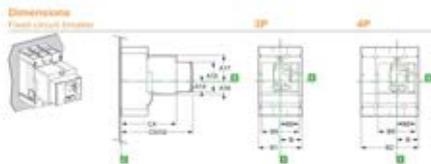

- A: Position indicator (positive contact indication)  
 B: spring status indicator (charged, discharged)  
 C: manual spring-charging lever  
 D: Keylock device (optional)  
 E: I (ON) pushbutton  
 F: O (OFF) pushbutton  
 G: manual/auto mode selection switch. The position of this switch can be indicated remotely  
 H: operation counter (PA-CNSX400-630)

When equipped with a motor-mechanism module, CNSX circuit breakers feature very high mechanical endurance as well as easy and sure operation:

all circuit-breaker indications and information remain visible and accessible, including trip-unit settings and indications  
 suitability for isolation is maintained and padlocking remains possible  
 double insulation of the front face.

A specific motor mechanism is required for operation via the communication function. This communicating motor mechanism must be connected to the BSCM module to receive the opening and closing orders. Operation is identical to that of a standard motor mechanism.

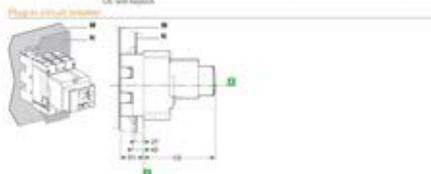

#### Operation

The type of operation is selected using the manual/auto mode selection switch. A transparent, lead-seal cover controls access to the switch.

#### Automatic

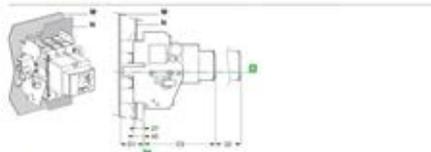

When the switch is in the "auto" position, the ON/OFF (I/O) buttons and the charging lever on the mechanism are locked.

Circuit-breaker ON and OFF controlled by two impulse-type or maintained signals.  
 Automatic spring charging following voluntary tripping (by MN or MX), with standard wiring.  
 Mandatory manual reset following tripping due to an electrical fault.  
 Manual

When the switch is in the "manual" position, the ON/OFF (I/O) buttons may be used.  
 A microswitch linked to the manual position can remote the information.

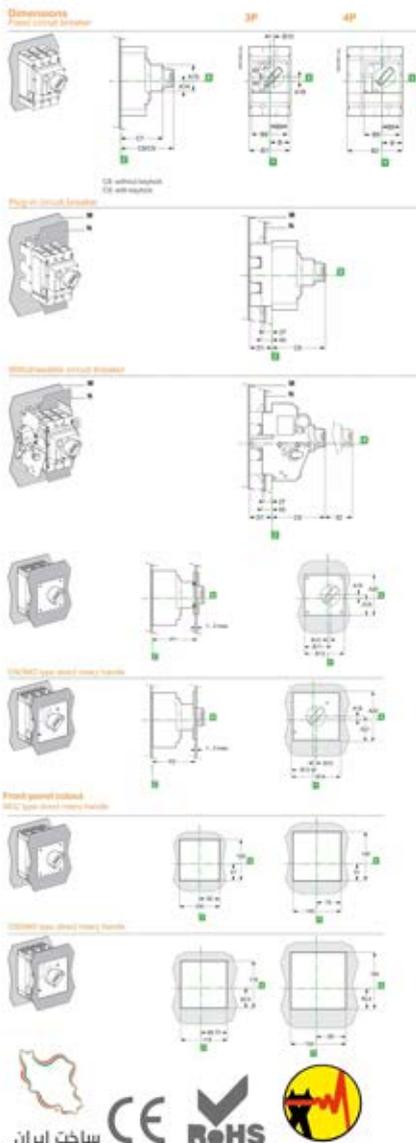

Circuit-breaker ON and OFF controlled by 2 pushbuttons I/O.  
 Recharging of stored-energy system by pumping the lever 8 times.  
 Padlocking in OFF position.  
 Installation and connections

All installation (fixed, plug-in/withdrawable) and connection possibilities are maintained.  
 Motor-mechanism module connections are made behind its front cover to integrated terminals, for cables up to 2.5 mm<sup>2</sup>.

# Direct or Extended Rotary Handle

### Direct rotary handles

#### Installation

The direct mounted rotary handle has to be mounted by 3 screws on the front accessory cover.

#### Operation

##### The direct rotary handle maintains:

suitability for isolation  
 indication of the three positions OFF (O), ON (I) and tripped (Trip)  
 access to the "push-to-trip" button  
 visibility and access to the trip unit.  
 Device padlocking

The circuit breaker may be locked in the OFF position by using one to three padlocks (not supplied) or in ON position after customer modification of the rotary handle before installation, padlock shackle  $\varnothing 4-8$  mm. Locking in the ON position does not prevent the circuit breaker from tripping if a fault occurs. In this case, the handle remains in the ON position after the circuit breaker trips. Unlocking is required for the handle to go to the tripped then the OFF position.

#### Variations: door locking

Door locking built-in functionality can be activated by the customer to prevent opening the door when the circuit breaker is ON or in trip position. For exceptional situations, door locking can be temporarily disabled with a tool by qualified personnel to open the door when the circuit breaker is closed.

### Extended rotary handles

#### Installation

##### The door-mounted (extended) rotary handle is made up of:

a unit that has to be screwed on the front accessory cover of the circuit breaker  
 an assembly (handle mechanism and front plate) on the door that is always secured in the same position, whether the circuit breaker is installed vertically or horizontally  
 an adjustable extension shaft.

The handle mechanism is fixed with a nut ( $\varnothing 22$  mm) to make assembly easier. The Laser Square tool (GVAPL01) can be used to accurately align the hole on the door with the circuit breaker.

#### Operation when door is closed

The door mounted handle makes it possible to operate a circuit breaker installed in an enclosure from the front. The door mounted operating handle maintains:

##### suitability for isolation

indication of the three positions OFF (O), ON (I) and tripped (Trip)  
 visibility and access to trip unit when the door is open  
 degree of protection of the handle on the door: IP54 or IP65 as per 60520.  
 Mechanical door locking when device closed

A standard feature of the extended rotary handle is a locking function, built into the shaft, that disables door opening when the circuit breaker is in the ON or tripped positions. Door locking can be temporarily disabled with a tool by qualified personnel to open the door without opening the circuit breaker. This operation is not possible if the handle is locked by a padlock.

#### Device and door padlocking

##### Padlocking locks the circuit breaker handle and disables door opening:

standard situation, in the OFF position, using 1 to 3 padlocks, shackle  $\varnothing 4-8$  mm, padlocks are not supplied  
 for the black handle, with a voluntary modification of the door handle (to be done by the customer during installation), in the ON and OFF positions. Locking in the ON position does not prevent the circuit breaker from tripping if a fault occurs. In this case, the handle remains in the ON position after the circuit breaker trips. Unlocking is required for the handle to go to the tripped then the OFF position.

##### Operation when door is opened

An open door shaft operator can be used to operate the circuit breaker when door is opened. This accessory complies with UL 508A.

The indication of the three positions OFF (O), ON (I) and tripped (Trip) is visible on the circuit breaker.

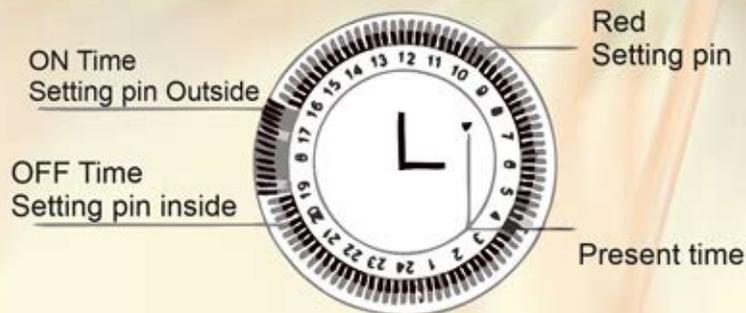

The circuit breaker itself may be locked in OFF position when the door is opened by 1 padlock / lockout hasp, shackle  $\varnothing 4-8$  mm.

#### Shaft length

##### The shaft length is the distance between the back of the circuit breaker and the door:

minimum shaft length is 200 mm  
 maximum shaft length is 600 mm  
 shaft length must be adjusted.

# MECHANICAL INDUSTRIAL TIMER MOVEMENT

## Main

Size: 6.2\*6\*3.58cm

Color: white

Material: plastic

Working voltage: 250V 50Hz

Working current: 16 (4A)

Rated power: 3680W

Power dissipation: < 1W

Setting range: 30min ~24h

Error: < 5min (a day)

Control output: 16A 250V

## Features:

< Time setting: With up to 24h, you can program your devices to auto on/off.

< Automate your life: Automate your home or office lighting to enhance home security. Turn on and off lamps, small appliances, Christmas trees, holiday light decorations and other electrical devices with this handy timer.

< Money and energy saving: Turn on and off TV, fan, oven, heaters and other electrical devices with our automatic timer to help reduce energy and save money.

< Application: Suitable for  $\leq$  16A electrical devices

< Easy to use: This timer features an easy to use, built-in pin dial that allows you to set your timer.

< Material: Constructed from good quality plastic, impact resistant, long lasting and durable.

## Notes:

1. Please allowed 1-3mm differences due to manual measurement, thank you for your understanding!

2. Due to the difference between different monitors, please understand that the picture may not reflect the actual color of the item.

Package list:

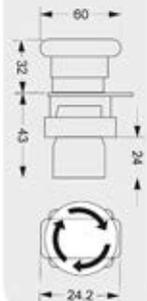

1 x mechanical timer
